KASHYAP RATHOD

Java Developer (Spring Boot / Spring MVC)

+91 90543 97202 | kashyaprathod03@gmail.com | github.com/kashyapRathod03 | linkedin.com/in/kashyaprathod

SUMMARY

Java Developer with 1+ year of professional experience and a 4-month internship building enterprise web applications using Java and Spring (Spring MVC, Spring Boot). Experienced in analyzing U.S. FinCEN SAR filing requirements and Canadian FINTRAC compliance reporting (EFTR2, STR2, LCTR2), translating regulatory user guides into field-level business rules, and implementing validation and warning logic to ensure report accuracy. Skilled in third-party API integration, performance optimization for large transaction datasets, and building supporting UI components with Vue.js. Comfortable working across the full stack with Docker, Git, and REST APIs.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL

Frameworks: Spring Boot, Spring MVC, Spring Security (basic), Hibernate/JPA (basic)

Web: JSP, HTML, CSS, Vue.js, jQuery

Compliance Domain: FinCEN SAR analysis & validation, FINTRAC reporting (EFTR2, STR2, LCTR2), STP rule processing

Tools & Practices: Git, Postman, Docker (basic), Gradle/Maven, JWT Authentication, REST APIs, Kafka (basic)

Databases: MySQL, PostgreSQL (exposure), MS SQL (exposure)

EXPERIENCE

Java Developer — enviewIMF (Spring MVC) *May 2025 – Present*

Navaera Software Services Pvt. Ltd. | Vadodara, Gujarat

- Analyzed U.S. FinCEN SAR (Suspicious Activity Report) filing requirements against official user guides to determine field-level business logic and inter-field dependencies.
- Designed and implemented validation and warning logic to check SAR reports against FinCEN rules prior to submission, reducing rejected and inaccurate filings.
- Built and maintained Spring MVC workflows for creating and submitting FINTRAC reports (EFTR2, STR2, LCTR2), including straight-through processing (STP) for compliant reports and UI-based flagging for manual correction and resubmission of failed rules.
- Integrated third-party services, including the OpenCorporates and SwiftRef AI APIs, for entity data enrichment and validation.
- Developed frontend features using Vue.js, including an infinite-scroll module that efficiently rendered 5,000+ transactions in the UI.
- Improved EFTR2 transaction lookup performance, speeding up search and navigation across large transaction datasets.

Software Engineering Intern — Java / Spring Boot *Jan 2025 – Apr 2025*

Navaera Software Services Pvt. Ltd. | Vadodara, Gujarat

- Contributed to an Employee Evaluation System (Spring Boot + Thymeleaf) with role-based modules for Admin, Employee, Manager, and COO.
- Implemented workflows for task submission, evaluation, and grievance handling with role-specific dashboards.
- Worked within a layered Controller–Service–Repository architecture, participated in testing cycles, and supported bug fixing.

PROJECTS

RestroHub — Full-Stack Restaurant Ordering Platform (Spring Boot) *Personal Project*

- Built a full-stack restaurant ordering platform with a Spring Boot REST API backend and JWT-based authentication for secure, role-based access.

- Designed a dynamic theming engine allowing restaurant admins to customize colors and text, rendered live as the restaurant's own customer-facing website.
- Implemented QR-code-based table ordering, letting customers view the menu and place orders directly from their table.
- Built a receptionist dashboard for real-time tracking of pending, in-progress, and completed orders along with payment status.
- Followed a structured Git workflow and validated all REST APIs using Postman.

Employee Evaluation System (Spring Boot + Thymeleaf) *Academic + Internship*

- Developed a role-based web application to automate task tracking, performance evaluation, and grievance resolution, with dedicated dashboards for Admin, Employee, Manager, and COO roles.
- Implemented pagination to optimize large data lists for usability and performance.
- Built LDAP-based authentication and authorization for secure role-based access control.

Stanfield — Document & Media Management Module (Spring Boot) *Internship Project*

- Developed a complete upload module supporting multiple file versions, including snapshot/preview generation for videos, documents (DOCX, PPTX, XLSX), and images.
- Implemented file conversion, database storage/retrieval, and UI integration for displaying uploaded content.
- Built a custom document comparison feature to identify and display differences between document versions.
- Implemented SAML-based authentication using CAS and supported broader authentication/authorization mechanisms.

EDUCATION

B.Tech, Computer Engineering — CHARUSAT University *Jul 2021 – Apr 2025*
Changa, Gujarat • CGPA: 9.16

HSC Board — Samrpan Techno School *Jun 2019 – Mar 2021*
Surat, Gujarat • Percentage: 85.20%

ACHIEVEMENTS

- Runner-up, Full Stack Web Hackathon (University) — Sep 2023.
- Solved 300+ problems on LeetCode — Aug 2023 – 2025.
